

# YOUR PITCH HAS ONLY 10 AMPS (approx. 2200 W) OF ELECTRIC

Please see below what electric your appliances take and what you can have on at the same time.

Remember items like your electric water heater and blown air heating switch on and off on the thermostat.

Kettle	2000W (2 Kw)	about 8.7 amps
Kettle (small)	750W	about 3.3 amps
Toaster & Iron	1300W (1.3 Kw)	about 5.6 amps
Microwave Cooker	1200W	about 5.2 amps
Colour TV	50W	about 0.2 amps
Fan Heater	1000W (1 Kw)	about 4.3 amps
Battery Charger	100W	about 0.4 amps
Refrigerator	125W	about 0.5 amps
Table Lamp	60W	about 0.2 amps
Blown Air Heater	1000-2000W	about 4.3-8.7 amps
Air Conditioning	1000W	about 4.3 amps

Remember, that at busy times the full 10 amps may not be available to all site outlets at the same time. All caravanners are urged to limit the use of electricity during periods of heavy demand by the use of low wattage kettles and gas for water boilers, heaters etc. This will ensure everyone then has an uninterrupted supply for low energy appliances such as fridges, 230 volt lighting, battery chargers etc. Check the specimen list above, but also know the wattage of your own appliances.

From these ratings you will see that at 230 volts an appliance of 1 Kw (1000 watts) uses about 4.3 amps, so you can work out others.
